

THE ENVIRONMENT

Environment protection is one of our highest priorities. We live and work closely with nature and are committed to protecting the environment in everything we do. In order to maintain a harmonious relationship with nature during our production process, we work together with farmers and our local partners to apply these conservation practices related to the raw materials as follows:

- Commit to minimizing the use of pesticides and not using any herbicides in rice plantation.
- Adopt cultivation methods that respect the environment.
- Apply eco-friendly rice spirit production practices to improve water management and reduce water requirements during the production process and also minimize waste from the production process.

We also are committed to compensating our producers fairly for their services and products so that the essence of respect is captured from the beginning all the way to the end of the production cycle.
